RE: Site Management Activity Completed, Fanny Allen Hospital(site #96-1941)

Dear Mr. Keelty:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the July 9, 1996 summary report from Forcier, Aldrich & Associates, Inc.(FAA) on the status of the subsurface petroleum investigation at the above mentioned site. This report requested that the above referenced site be designated as having Site Management Activity Completed (SMAC). Based on the current conditions at this site and the information contained in this report, the SMS has determined that you have met the conditions of the Waste Management Division's January 8, 1996 letter, and that the site is now eligible for a SMAC determination.

This means that the SMS has determined the following:

- the source of the contamination at this site was adequately defined in nature and extent during the October, 1995 underground storage tank removal and the subsequent investigation;
- the sources of contamination at this site (the underground storage tanks and the approximately fifteen cubic yards of grossly contaminated soils) have been either removed or adequately remediated;
- the site no longer poses an unreasonable risk to human health or the environment.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division have determined require no further management are classified as SMAC. This designation does not release Fanny Allen Hospital from any past or future liability which may arise from the petroleum contamination which originated from the leaking underground storage tanks at this site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the 1995 release.
